- Hosted SP federation layer
- Monitoring, Auditing, Logging and Reporting
- Partner Access to Portal Dashboard
- Testing and Federation Certification
FuGen MISP™ Delivery Platform

(A Cloud Services Platform)

- Protocol Agnostic
- Multi-IdM Support
- Endpoint Virtualization
- Lifecycle Federation Services

Scalable, flexible, and extensible service-in-the-cloud model to meet current and future customer needs of scaling and managing their federations
e-Gov Focus For Demonstrations

- Denmark scenario based on SAML 2.0 with step-up authentication
  - Deployment validation compliance according to Kantara e-Gov 1.5, OIO SAML 2.0, GSA SAML 2.0, and the draft ICAM SAML 2.0 profiles
- Italian scenario based on Information Card
  - Deployment validation compliance according to ICAM IMI 1.0 profile
- Denmark scenario based on OpenID
  - Deployment validation compliance according to ICAM OpenID 2.0 profile
Appendix
This demonstration shows a Denmark citizen accessing their social network application and from there, their tax services with a step-up authentication. The whole scenario runs within FuGen’s MISP™ virtual environment and validated against several SAML 2.0 profiles.
This demonstration shows a Turin (Italy) agency providing access with a card issued by the local municipality. The whole scenario runs within FuGen’s MISP™ virtual environment and validated against the ICAM IMI 1.0 profile.
This demonstration shows a Denmark citizen accessing their social network application provided by the Denmark government. The scenario has FuGen’s MISP™ virtual environment hosting the RP and an external IP compliant with the ICAM OpenID profile.
