UMA2 has an active business-legal framework workstream

The premise of the Work Group's report [A Proposed Licensing Model for User-Managed Access](#) is that UMA enables the individual to centrally manage access and use rights with respect to personal digital assets by converting permission tokens into machine-readable licenses. The group is working on a companion document that outlines a larger business-legal framework for achieving a wide variety of rights delegation use cases involving UMA technology.

Here are the [UMA Grant \(PDF, HTML for deep linking\)](#) and [UMA Federated Authorization Recommendations \(PDF, HTML for deep linking\)](#). Don't miss the **UMA2 masterclass** delivered by two [UMAnitarians](#) at the [Identiverse](#) conference in Boston in June 2018 ([slides](#) and [video](#)). (The [slides](#) and [video](#) from the previous year's **Authorization: Age of UMA** session set in the [Marvel Cinematic Universe](#) was also a big hit!) The [Release Notes](#) review all final UMA1-to-UMA2 changes. See also the [UMA Implementer's Guide](#), our list of known [Implementations](#), and discussions of [Case Studies](#). Finally, see the detailed [UMA Grant sequence diagram](#) and [FedAuthz sequence diagram](#).

User-Managed Access (UMA) is an [award-winning](#) OAuth-based protocol designed to give an individual a unified control point for authorizing who and what can get access to their digital data, content, and services, no matter where all those things live. Read the [specs](#), join the [group](#), check out the [implementations](#), follow us on [Twitter](#), like us on [Facebook](#), get involved!

The [UMA Roadmap for 2016](#) guided the use cases and technical issues that the Work Group focused on in its UMA2 effort. You can find other drivers in the Work Group's original compendium of [Scenarios and Use Cases](#), its [Case Studies](#) page, and its [User Stories](#) page.
