### Discussion

#### Update on the initiative to create a structure mapping between the KI IAF and other frameworks towards the improvement of comparability (Andrew).

- During the TIIME Meeting in Vienna, February 2017 it was discussed the need to work together and find common ground within the informal profiles based or inspired in KI IAF, such as Incommon, GEANT, eIDAS, etc. The interested parties will meet during [Internet2 Global Summit](#) (April 23-26, WDC US) and start creating a straw man for a structure mapping between the frameworks and the KI IAF, including a common catalogue of risks.
- Andrew Hughes commented that during the TIIME un-conference session, the discussion was focused on the various research and education federations that have profiled or adopted the KI IAF, and we have agreed to further discuss how much commonality do we have between the different frameworks and what should we do collectively and individually. Andrew is preparing the material for the group.
- He is making an analysis of the SAC and found that the service assessment criteria (SAC) are the second artifact that should exist for our CSP. The first artifact is the standard or the requirement that the CSP must meet and the criteria should be the test or the evidence required to show to the assessor that the CSP is meeting the requirement. The requirement is implied in the criteria but not stated. He is sampling some of the criteria groupings, what may look if we try to document the implied requirement. Can we come up with a collectively stated standard for what is required as a credential manager, registration agent, and verifier, Relying Party?. Each federation would have to write its own profile, so creating a meta framework would be easy. The sampling would available to share with IAWG before the meeting in Washington.

#### 800-83-3

- Ken Dagg commented that regarding comment [#1067](#), he does not see that sub issues b)\* and d)\*\* have been addressed in the two references made in the "will be resolved via" section. He believes that both are significant issues that need to be addressed before rev. 3 is published.

\*b) Existing credentials will need to be re-proofed because of both the changes of applicable assurance levels and the changes in the proofing requirements. This will have high economic and time investment.

\*\*d) Because of a, b and c getting service implementations to be compliant with the revised standards will take time. As such, there needs to be consideration of the timeframe and roadmap for implementation.

- It was suggested that Ruth comment back to Paul Grassi on [#1067](#) and point out what Ken has said.
- On Thursday, April 13 we will start the process of gathering comments on the Revised Draft of the parent document for Special Publication 800-63-3, whose comment period closes May 1, 2017.

- Ruth will send the pdf version to the list.

## Next Meeting
