WG - ISI (Information Sharing Interoperability)

About

The Information Sharing Interoperability Work Group is the successor to the Consent and Information Sharing Work Group (to be archived). WG-ISI continues development in the same domain as its predecessor with a modified and broadened scope to allow multiple projects to proceed under the default IPR option Non Assertion Covenant. It is envisaged that text from the Consent Receipt and from the Blockchain Identity Taxonomy will be re-contributed to ISIWG from CISWG subject to the agreement of those respective contributors.
