Protocol revisions: core spec

Lukasz agreed to do an editing pass on the core spec, adding his suggested error message template and notations in each place where error messages need to be generated.

We briefly discussed Lukasz's suggestions on the spec organization. We agreed to reorganize the spec to:

- Move the phase-1 stuff back near the beginning
- Move the resource registration stuff back out to a separate spec, inspired by OAuth moving the token stuff out
Eve, Lukasz, and Thomas will all be working on the spec over the next week and we'll coordinate among ourselves.
