The FIRE working group will extend the usability and adoption of the former IDESG's Identity Ecosystem framework and registry to help identity ecosystem participants and individuals with their identity and personal data management.

All FIRE WG work products will adhere to the IDEF Framework and the guiding principles in all of its products including documents, systems and protocols (e.g., will be "FIRE-proof"), and we will implement our own best practices within our own technology and program development.

On February 3, 2020 a second draft of a specification entitled Distributed Identity Assurance 1.0.0 was released by the Working Group with the aim of making the digital identity community aware of its existence and to receive initial reactions, suggestions and comments from beyond those member and non member participants in the FIRE Working Group. To be clear, this draft is an early version still under development by the WG and not yet ready to be submitted to Kantara's formal publications process for its Recommendations and Technical Specifications. The most current draft can be found in this Wiki's Draft Recommendations folder shown on the menu on the left hand side of this page. or click here Draft Recommendations

Chair:
Jim Kragh (July 2019)

Vice-Chair:
Mary Hodder (July 2019)
