

# Third-Party Profiles and Extensions

## Third-Party Profiles and Extensions

- [Profiles in the Healthcare Sector](#)
- [Profiles in the Financial Sector](#)

This page attempts to track third-party UMA profiles and extensions. Appearance of information here should not be taken as an endorsement by the UMA Work Group (though the group may subsequently choose to adopt any contributed third-party profiles or extensions as work items). We strongly recommend that profilers study and follow the advice given in the [Specifying Additional Profiles section](#) of the UMA core specification. As recommended in the UMA V2.0 Grant specification, an authorization server supporting a related profile or extension should supply any identifying URI in its `uma_profiles_supported` metadata.

### Profiles in the Healthcare Sector

The [HEART](#) (Health Relationship Trust) Working Group has profiled UMA 2.0 in the form of two specifications, [Health Relationship Trust Profile for User-Managed Access 2.0](#) and [Health Relationship Trust Profile for Fast Healthcare Interoperability Resources \(FHIR\) UMA 2 Resources](#), both at Implementer's Draft status as of this writing.

### Profiles in the Financial Sector

The not-for-profit company Origo has profiled UMA for use in the UK Pensions Dashboard ecosystem. Members from Origo screen-shared its profile and related materials to the UMA Work Group on [3 Dec 2020](#), subsequently contributing them on 6 Dec 2020 [under this \(revised\) licence](#) dated 21st December 2020 and the Work Group accepted the profile contributions for consideration as a work item. In April 2021 the UK Pensions Dashboard Programme and Kantara agreed [to make available on Kantara's website, the original contribution from Origo on these new License terms](#), disapplying the revised Licence terms dated 21st December 2020 as well as the UMA Work Group's own IPR that applied to the planned publication of Profile and Design Documents. The original contributions consist of the following (PDF downloads):
