

WG - FIRE (Federated Identifiers for Resilient Ecosystems)

This FIRE WG operates under the [Kantara Initiative IPR Policies Version 2.0 - Option Non-Assertion Covenant](#)

[JOIN THE FIRE WG](#) | [SUBSCRIBE](#) | [MAILMAN ARCHIVE](#) | [Charter](#) | [Calendar](#)

The FIRE working group will extend the usability and adoption of the former IDESG's [Identity Ecosystem framework and registry](#) to help identity ecosystem participants and individuals with their identity and personal data management.

All FIRE WG work products will adhere to the IDEF Framework and the guiding principles in all of its products including documents, systems and protocols (e.g., will be "FIRE-proof"), and we will implement our own best practices within our own technology and program development.

Updates:

On October 6, 2020, FIRE released a draft specification for [Mobile Authentication Assurance Statement](#). These credentials can be used to allow relying parties in [healthcare](#) (and other) communities to determine if the user's application can be trusted. Once this concept is widely adopted, trust can be bootstrapped from a collection of trusted applications into a framework of trust actors across the web.

On February 3, 2020 a second draft of a specification entitled Distributed Identity Assurance 1.0.0 was released by the Working Group with the aim of making the digital identity community aware of its existence and [to receive initial reactions, suggestions and comments](#) from beyond those member and non member participants in the FIRE Working Group. To be clear, this draft is an early version still under development by the WG and not yet ready to be submitted to Kantara's formal publications process for its Recommendations and Technical Specifications. The most current draft can be found in this Wiki's Draft Recommendations folder shown on the menu on the left hand side of this page. or click here [Draft Recommendations](#)
