Leadership Council WG and DG Updates
November 15, 2018

WG	Date	Activities
All	Nov 9, 2018	• A new version of the Operating Procedures has been passed by the LC. The Procedures will now proceed to an All Member Ballot. • The new version of the Operating Procedures includes better alignment with the Kantara Initiative Bylaws as well as a streamlining of many processes.
IAWG	Nov 11, 2018	• Updates to the SAC to accommodate challenges that have been encountered during assessments using NIST 800-63 Rev3 have been approved by an All-Member Ballot (October 27, 2018). These changes will be used by Assessors going forward. • Revisions to the IAF Overview (IAF1000) continue. A draft has been sent to current Kantara Approved CSPs for their input. The IAF Glossary (IAF1100) will be the next document to be revised. • The Group Charter has been endorsed by the Group and the current leadership team has been affirmed for another year.

CISWG	Nov 11, 2018	• The Group is well on the way to reframing Consent in general.
		• The hard work and persistent effort of several team members resulted in a demo around sharing consent receipt information. Many people have experienced the demo at several conferences. Andrew Hughes and others have excited people many of whom have begun participating and contributing to the WG. Work continues to make improvements to the demo.
		• Work on the demo has led to a series of high-level discussions around consent in general and how the WG would proceed with a features set for a specification for the next release. These discussions have improved participants' understanding and grasping the language used around Consent Receipt which will undoubtedly result in improving the next version of the Consent Receipt Specification.
UMAWG	Oct 11, 2018	• The Work Group has learned that some implementers have begun doing interoperability testing among themselves, and so is beginning to coordinate more formal "matrix testing" (a scheme for which can be seen here, from the UMA1 era). We will be also seeing a demo of WSO2's new UMA2 implementation at our Oct 18 meeting.
		• The WG is undertaking an analysis of resource owner and requesting party notification requirements coming from a variety of sources, partly related to Open Banking's "decoupled" needs.
		• Some offline progress is being made on finding opportunities to test the UMA business model, associated with the Vermont PIPC law.
CMSWG	Aug 16, 2018	• Progress has been slow on the primary deliverables of this WG. The overall plan is to develop a document outline to capture Consent Management common practices, develop an interview protocol and survey, then gather data from as many organizations as possible. Then, the results will be analysed for common practices and areas where standardization could help. We have renewed committments of participant time starting in September, so hope to increase the rate of progress at that time.

eGovWG	Aug 16, 2018	• eGov hosted a webinar on August 16, 2018. The Australian DTA has been working on their new Trusted Digital Identity Framework (TDIF). It is a comprehensive set of documents[1] for digital identity in Australia. It covers a range of topics from IDM, Authentication, security privacy, fraud control, etc. DTA are presenting the trust framework aspects on Thursday, August 16 at 14:00 UTC. Webinar recording will be available after the event.
OTTOWG	**No update since** Sept 14, 2017	• Very few meetings held over the summer. Currently working on the JSON-LD vocabulary for SAML. • In the past we had looked at blockchain technologies as a solution for publishing federation data, but we got bogged down on the logistical details. For example, which blockchain, what is the business model, how would we publish claims. Sovrin maybe provides some of the answers to this question. More information about Sovrin can be found at http://sovrin.org. The design of OTTO aligns nicely with Sovrin. We are using JSON-LD as the data format, and the API's defined in OTTO could be used as Sovrin data endpoints. • The DHS ERASMUS pilot, which has been a driver for OTTO, is currently in limbo. The ERASMUS team will be presenting the work to the DHS first responder S&T group for December 7th. That is seen as a necessary gate for Phase II of the project. • Mike will be presenting OTTO at an Internet2 conference right before IIW.
HIAWG	**No update since** Sep 7, 2016	• The HIAWG is currently without a chair.
UMADevWG	**No update since** Aug 19, 2016	• The WG has updated its Implementations questionnaire and has started to parcel out assignments to collect data from third-party implementers and migrate data from the old page to the new page
IRMWG	**No update since** Aug 18, 2017	• The group is deliberating on their next publication. There is some interest in investigating how Graph data technologies can be used to represent relationships and feed into 'traditional' authorization systems

FIWG	**No update since** Aug 18, 2017	• A project will start soon to create an SP 800-63-3 update to the eGov SAML profile.
IRMWG	**No update since** Aug 18, 2017	• The group is deliberating on their next publication. There is some interest in investigating how Graph data technologies can be used to represent relationships and feed into 'traditional' authorization systems

DG	Date	Activities
IDoT DG	Oct 15, 2018	• The current chair, due to circumstances beyond his control, is resigning. • One participant of the group (Scott Shorter) has proposed redirecting the DG to Smart Cities. He will assume being the Chair if there is support for this direction. • Failing support, the DG will be dissolved.
BSC DG	**No update since** Aug 18, 2017	• The Blockchain and Smart Contracts Report to Kantara will be formally published in August. A marketing campaign will accompany the publication
