High-level protocol view

Entities participate as protocol endpoints

Authorizing User
  user agent
  Authorize
  Store
  Enforce
  Access

Host
- Protected Resource
  PEP
  Protect
  PDP

Authorization Manager
- Grant Access

Requester
Contractual view
Requesting party is a natural person other than the authorizing user

- Authorizing User
- Intermediary that helps with hosting
- Intermediary that helps with authorization
- Intermediary that helps with requesting
- Requesting Party
- Access Authorization Agreement

PEP and PDP connections indicate the flow of information or process steps.
Contractual view

Requesting party is a legal person seeking access on their own behalf or (indirectly) that of the authorizing user.
User experience view of the protocol
Authorizing user interacts directly with the requester service ("Data Dominatrix")
User experience view of the protocol

Authorizing user does not interact directly with the requester service ("Hey, Sailor")
High-level protocol view
Authorizing user and host service user are different; how to accomplish protocol-wise? How to reflect in the contractual view?
